

TÜRKİYE HALK BANKASI A.Ş. ENERGY POLICY

“Let’s Spare Energy for the Future”

Our aim in context of our Sustainability and Environmental Policies is; as a result of continuous improvement activities, to make efforts towards reducing our energy consumption, to reduce our energy loss and to increase our energy efficiency.

To achieve our goal; we set improvement targets on our energy consumption, taking into consideration our consumption variables, buildings and climate conditions, our total working hours and other possible effects. We keep track of our energy consumption through energy monitoring systems. We assess our performance by monitoring our energy consumptions and we prepare action plans for improvement. We inform our employees and shareholders via various communication tools and trainings and raise their awareness. We make sure that our energy management system is up to international standards.

In line with the strategies designated by our Bank, we commit to,

- Implementing the energy management system by integrating it with other corporate management practices,
- Keeping the energy consumptions caused by our activities under control,
- Continuously improving our energy consumption performance also by keeping up with the developing technology,
- Providing necessary human resources, information, technology and financial resources for an effective energy management in reaching our goals and objectives,
- Complying with the national and international legal and other requirements that we are subject to about energy consumption and efficiency,
- Supporting the supply of energy efficient products and services in procurement processes and design efforts that will enhance our energy performance,

“For the world to be habitable, for the life to be sustainable...”
